

## HIP ABDUCTION ORTHOSIS (H. A. O.)

The Hip Abduction Orthosis has been used for more than two decades on thousands of post operative patients to help stabilize the hip. The low profile pelvic section and thigh shell are comfortable but rigid enough to ensure proper function. The Hip Abduction Orthosis is affective at resisting adduction and excessive flexion. The joint features easy to adjust flexion and extension stops.

- Lightweight
- Easily adjustable flexion and extension stops
- Easily adjustable for length, abduction, and hip development
- Low profile
